

Not Now

FRONTABLE

The new edition of the FRAN lamp does not fly, but has a solid base for a stable stand. The straight-lined bases are available in beige and metallic and thus fit into different living situations. With their object character, they underline both flamboyant and architecturally austere environments. The lampshades of the table and floor lamp are made of the natural material raffia. The natural fibres cast the cosy light typical of FRAN.

The table lamp FRAN is available in the sizes midi and large. In 70 or 90 centimetre height, it is present on the night table as well as a sculptural object on a sideboard.

FRAN TABLE

description:	stand light
material:	raffia fringes, powder coated steel, rubber
colours available :	grey, beige
including:	light bulb is not included
made in:	latvia, poland
production:	100% hand made

weight:	4 kg

table light:	midi
measurements:	700mm x 470mm
weight:	6 kg

FRAN FLOOR

With a solid block base, FRAN FLOOR is a massive floor lamp with a height of 180 centimetres. Its lampshade unfolds an eccentric effect with its 80 centimetre diameter.

FRAN FLOOR

FRAN

The lights are handmade in Riga. Like plant hanger LUCILLE, FRAN is produced as part of a social project that gives young mothers the opportunity to work flexible hours.

FRAN is available in four bold block colors (beige, coral, green and black), that work on their own as in monochrome or contrasting combinations as well.

weight:	1,5 kg

FRAN EDITION

The FRAN EDITION is an extension of the pendant lamp collection, available in three additional sizes and shapes. The EDITION is even more demanding in its production than other lights of the FRAN family, as more fringes are sewn by hand on different shapes. The different and voluminous objects are reminiscent of matryoshka, Asian lanterns or traditional African masks.

For the salon of ROSA KARL, LLOT LLOV has developed two new FRAN lamps, which are now also part of the Raffia collection. FRAN DRUM & FRAN HIVE hang above the vintage Italian sofa, providing a cosy zone in addition to acoustic inhibition.

The MEDEIA trio is not only divers through its geometric cuts. Each vase has its purpose of bouquet of flowers. Since MEDEIA BOLD restrains the wild branches, MEDEIA SLIM loves to hold just one flower. MEDEIA MIDI is self-confident even without any flower bouquet and charming just though its clear geometric shape. Not every vase needs to carry flowers.

With their geometric and austere shapes, the three vases are a sculptural counterpart to the bouquet of flowers they hold. The MEDEIA SLIM hip keeps the posy together, while the stems have space and water. The Trio is made from powder-coated aluminum and dresses in black, white, blue, raw and pigeon.

ADA planter was made in a metal spinning process out of aluminum. They come in five types, all can be filled from both sides, allowing for endless combinations from cactus as well as palm trees.

The planter edition is available in black and brushed aluminum. The unpainted surface shows the raw material. Each plant pot is hand-turned and hand-brushed and is reminiscent of an untreated industrial piece. The slightly reflective metal surface creates a beautiful contrast to the fresh green leaves. As the surface is not lacquered, the material ages in a natural way, but is resistant to corrosion.

ADA is suitable for indoor, but also for outdoor use. For exterior use, the rubber plug should be removed to prevent rainwater from accumulating

ADA planter like the sun as well as shade, they most enjoy living in larger groups.

Addressing the need of our customers looking for better domestication of the largest potted plants, we added ADA BIG to our planter collection. With 58 centimeters of height and 40 centimeters of diameter, the biggest of planters is the one to make an impression. Made to house the large plants, ADA BiG will be an elegant addition to your lounge area or garden.

The frame THEO puts pots from diameter 17 - 22 centimeter up in the air. Two stoppers made from cork are included. They are plugged into the hole in the bottom due to keep the roots well supplied with water and match any pot. Equipped with a 150 centimeter long rope, THEO allows adjusting the height dynamically.

The three THEOS are exoskeletons for domestic flora. They come in triangle, square and circle and are designed to hold differently sized potted plants. The simple geometric shapes merge different functions. THEO frames the greens, protects them and gives them hold while growing.

LUCILLE

Less is a bore when it comes to the domestic jungle. LUCILLE is a contemporary interpretation of a hanging plant basket and organizes our lush indoor greenery.

The knotted structure is adapted from the traditional macramé but converted for our modern needs. While conventional flower nets end in a bunch of loose ends, LUCILLEs construction is turned upside down and the ropes are bundled at the top. The noose serves as a hanging loop and the hoist also modifies the height.

With its big meshes and without curlicues, the airy cocoon leaves room for the plant to develop and serves as a climbing aid. Looking up from beneath we can see the usually hidden natural processes. Earth and roots are visible through the bottom of the hand-blown glass flowerpot.

The production and assembly of LUCILLE is a collaboration with Dobbins and Daughters, a socially responsible fashion company that closely cooperates with young Latvian mothers. The corporate concept allows them to work from home and finish the handcrafted pieces as it fits their schedule. Each piece is made by hand and slightly different. If you wish to select a certain colour, please contact us.

A black metal grid structure is mounted on a white wall. The grid consists of several parallel lines that intersect to form a diamond-shaped pattern. The lines are secured to the wall with black plastic clips. The word "RAINIK" is overlaid in the center of the image in a large, bold, black, sans-serif font. The letters are slightly transparent, allowing the grid lines to be seen through them.

RAINIK

RANK is a modular support system for climbing plants that can be mounted against the walls. Both for indoor and outdoor use. Thanks to the powder coated material.

Comes in a set of 5. Freely arrangeable and connectable according to customers preferences. Simple, geometric shapes create a landscape and a frame for lianas and leaves that the plants can grow into. Gives them a hold while growing.

RANK

H **O** **O** **K**

HOOK is a cylindric round wood that adjusts itself and thus becomes a little helper at every corner. Whether it be a wall or a cabinet, each and everything can with the help of HOOK become a piece of furniture with hooks or a very special coat rack. The cylinder is wedged tight in a 90-degree angle and stable enough to carry some weight.

HOOK comes in natural beech wood or black lacquered.
It comes in pairs, but can be individually applied and combined to create a very personal coat rack.

HOOK

measurements:	50 mm x 180 mm
weight:	600 gram

A collection of colorful, knotted ropes in shades of blue, orange, and grey, with the word 'IMMATT' overlaid in large black letters. The ropes are arranged in a vertical, slightly chaotic manner, with some knots and loops visible. The background is a plain, light color.

IMMATT

MATT is a lighting element with the ability to dynamically adapt itself according to the individual needs of its user, changing its appearance with the place of installation.

Hung as a single piece, knotted in a group or set on a hook on the wall: MATT simply fits into the scene of its placement, flexibly draping itself to the shape and situation of a room.

The fluffy woven fabric of the knitting hides the sober technology within (like cables and socket) and evokes the impression of ropes meeting and melting into each other. The energy-saving bulb used for Matt radiates a warm, glowing light.

The yarns used for MATT are imported from Italy and knitted in Bavaria. A computerized knitting machine produces the knitted cable-cover of the light. The electric pieces are first put together, then threaded through the knit-ware by disabled people in a Berlin workshop (Vfj Werkstätten). The Merino yarn used on MATT is 100% pure. In its structure it is smooth and hardly hairy. The knitting is soft and dense.

measurements:	Ø 15 x 12000 mm
weight:	1,5 kg

RAW

RAY is a lamp that has the capability to follow its owner on his/her heel. The cable of a hanging lamp is prolonged by 12 meters, thus enabling RAY to become a lying, hanging or atmospheric lamp.

The possibilities for using the device are unlimited, adapting to any method of playful arrangement.

The fluffy woven fabric of the knitting hides the sober technology within (like cables, socket and shade). The energy-saving bulb used for RAY radiates a warm, glowing light.

RAY hangs on to things, wraps objects together, follows the user to where it is needed, forming sculptures as it goes. In this way, the lamp combines the essentials of Ilot Ilov, who always aim to involve the user as a designer.

RAYs lampshade and the 12 meters of cable are covered by knitted merino wool. Due to this choice of material, it is intended to serve as a main source of light over a dinner table or in the designated reading corner. Used as a wall-mounted lamp, winding lamp, knotted or just lightly slung over the back of a chair - this lamp is made to create lighting space on a high aesthetic level whilst providing complete flexibility in adjusting to ones personal changing needs.

RAY

EARL is a flexible light that is convincing through its simple, but a dynamic system. The wooden pearls threaded on a cable act as levels in order to adjust the illuminating object. A hook locates the light source to any desired position. This provides an easy method of changing height and orientation, which enables a wide variety of implementation. The led light source is embedded into the biggest pearl at the end of the thread. The silicone shade is pushed onto this pearl without being fixated. Similar to a spherical joint, the silicone shade can be moved into different directions.

GRIT

The stool GRIT stool with its thin wiring has the appearance of a delicate drawing. The cross-wiring resembles a steel basket and offers due to the many connecting points a lot of stability. To enhance sitting comfort a cork seat with the grit of the wiring on the underside can be added. GRIT can be stacked and is equally suited for indoors and outdoors.
