

Not Now

FRONTABLE

The new edition of the FRAN lamp does not fly, but has a solid base for a stable stand. The straight-lined bases are available in beige and metallic and thus fit into different living situations. With their object character, they underline both flamboyant and architecturally austere environments. The lampshades of the table and floor lamp are made of the natural material raffia. The natural fibres cast the cosy light typical of FRAN.

The table lamp FRAN is available in the sizes midi and large. In 70 or 90 centimetre height, it is present on the night table as well as a sculptural object on a sideboard.

FRAN TABLE	
description:	stand light
material:	raffia fringes, powder coated steel, rubber

FRAN

The lights are handmade in Riga. Like plant hanger LUCILLE, FRAN is produced as part of a social project that gives young mothers the opportunity to work flexible hours.

FRAN is available in four bold block colors (beige, coral, green and black), that work on their own as in monochrome or contrasting combinations as well.

HOOK is a cylindric round wood that adjusts itself and thus becomes a little helper at every corner. Whether it be a wall or a cabinet, each and everything can with the help of HOOK become a piece of furniture with hooks or a very special coat rack. The cylinder is wedged tight in a 90-degree angle and stable enough to carry some weight.

HOOK comes in natural beech wood or black lacquered.
It comes in pairs, but can be individually applied and combined to create a very personal coat rack.

HOOK

In collaboration with the Portuguese rug label ›rug by GUR‹ we designed our supersize pillows created from their handmade multicoloured rugs. Because of their size, they double as a seat cushion as well as a rest.

Front and back of the GUR pillow display contrasting colours that melt into the fringes to both sides.

The MEDEIA trio is not only divers through its geometric cuts. Each vase has its purpose of bouquet of flowers. Since MEDEIA BOLD restrains the wild branches, MEDEIA SLIM loves to hold just one flower. MEDEIA MIDI is self-confident even without any flower bouquet and charming just though its clear geometric shape. Not every vase needs to carry flowers.

With their geometric and austere shapes, the three vases are a sculptural counterpart to the bouquet of flowers they hold. The MEDEIA SLIM hip keeps the posy together, while the stems have space and water. The Trio is made from powder-coated aluminum and dresses in black, white, blue, raw and pigeon.

ADA  BIG

Addressing the need of our customers looking for better domestication of the largest potted plants, we added ADA BIG to our planter collection.

With 58 centimeters of height and 40 centimeters of diameter, the biggest of planters is the one to make an impression.

Made to house the large plants, ADA BiG will be an elegant addition to your lounge area or garden.

ADA BIG

planter:	big
measurements:	580mm x 400mm
weight:	3,5 kg

ADA planter was made in a metal spinning process out of aluminum. They come in five types, all can be filled from both sides, allowing for endless combinations from cactus as well as palm trees.

The planter edition is available in black and brushed aluminum. The unpainted surface shows the raw material. Each plant pot is hand-turned and hand-brushed and is reminiscent of an untreated industrial piece. The slightly reflective metal surface creates a beautiful contrast to the fresh green leaves. As the surface is not lacquered, the material ages in a natural way, but is resistant to corrosion.

ADA is suitable for indoor, but also for outdoor use. For exterior use, the rubber plug should be removed to prevent rainwater from accumulating

ADA planter like the sun as well as shade, they most enjoy living in larger groups.

The frame THEO puts pots from diameter 17 - 22 centimeter up in the air. Two stoppers made from cork are included. They are plugged into the hole in the bottom due to keep the roots well supplied with water and match any pot. Equipped with a 150 centimeter long rope, THEO allows adjusting the height dynamically.

The three THEOS are exoskeletons for domestic flora. They come in triangle, square and circle and are designed to hold differently sized potted plants. The simple geometric shapes merge different functions. THEO frames the greens, protects them and gives them hold while growing.

LUCILLE

Less is a bore when it comes to the domestic jungle. LUCILLE is a contemporary interpretation of a hanging plant basket and organizes our lush indoor greenery.

The knotted structure is adapted from the traditional macramé but converted for our modern needs. While conventional flower nets end in a bunch of loose ends, LUCILLEs construction is turned upside down and the ropes are bundled at the top. The noose serves as a hanging loop and the hoist also modifies the height.

With its big meshes and without curlicues, the airy cocoon leaves room for the plant to develop and serves as a climbing aid. Looking up from beneath we can see the usually hidden natural processes. Earth and roots are visible through the bottom of the hand-blown glass flowerpot.

The production and assembly of LUCILLE is a collaboration with Dobbins and Daughters, a socially responsible fashion company that closely cooperates with young Latvian mothers. The corporate concept allows them to work from home and finish the handcrafted pieces as it fits their schedule. Each piece is made by hand and slightly different. If you wish to select a certain colour, please contact us.

Ivita, Dace and Agnes, IDA for short, are based on weaving and macramé techniques and literally take LUCILLE one step further.

The two rope ladders were developed in Ilot Ilov's Berlin studio and then finalised for production during a workshop held with the women in Riga. They are not only made for climbing higher, but also house your everyday objects in the hallway, office or living room.

IDA Dace - an edged ladder with a poised appearance. The squared timber beams are stitched together. With its 6 steps and wide gaps in between, it is quite spacious for organizing clothes, shoes and other utensils.

IDA Agnes - an impressive ladder with 800 mm long wooden beams, but still light, elegant and almost like a shelf. Eight strings of yarn pass through the wooden boards in a criss-cross pattern and result in a moiré effect. This gives IDA Agnes a quite dramatic expression.

HANK

Discover your hidden reserves – explore your attics, examine your basements and collect all glass that reflects – Ilot Ilov is on a mission to reanimate every single ancient mirror that lies around.

Through HANK abandoned mirrors regain their place on the wall. The product itself consists of a harness made of waxed cotton rope, a wooden knob and a small aluminum plate. The rope is set up in a v-shape and adjusted by the plate, which sits on the mirror's upper edge. Here the ropes merge and lead to the wooden knob that holds the minimalist installation parallel to the wall.

This knob needs just one drill hole to be fastened and with its reduced parts HANK is clever and light. The set comes in two versions that cover literally every size and shape.

HANK consists of a few parts. The Aluminum plates are made in China. The cotton rope is from Spain and the wooden knobs are produced by a wood turnery in Poland. All parts are assembled at VfJ Werkstätten in Berlin.

The three sculptures TEA - THOMAS, EDISON and ALVA offer an arty alternative to decorate a wall. Their eccentric shapes have been adapted from high voltage insulators. Usually, these are made out of ceramic to isolate the fixing of electrical conductors. The wall knobs function as a wardrobe. They can be individually placed and combined with each other in many ways. Without covers, their varying structures create dynamic shapes on the wall. Besides their ability to hang clothes and present themselves in a sculptural way on the wall, they are a product designed in addition to our lamp MATT. One can wrap MATT around the wall knobs, fixing them on the wall. The knobs are packed singly and can be bought separately.

Due to its unusual size, TEA THOMAS also serves as an easy and practical alternative to a clothes hanger. It is available in black. With its delicate shape, TEA EDISON can also function to hook a hanger. It is made out of ash wood, which gives the technical shape an almost feminine touch. TEA ALVA has a soft white surface and therefore stands out. The pieces are hand-turned by a traditional woodturner in Erzgebirge. The area is famous for handicrafts. Each piece is slightly different.

weight:	200 g

IMATT

MATT is a lighting element with the ability to dynamically adapt itself according to the individual needs of its user, changing its appearance with the place of installation.

Hung as a single piece, knotted in a group or set on a hook on the wall: MATT simply fits into the scene of its placement, flexibly draping itself to the shape and situation of a room. The fluffy woven fabric of the knitting hides the sober technology within (like cables and socket) and evokes the impression of ropes meeting and melting into each other. The energy-saving bulb used for Matt radiates a warm, glowing light.

The yarns used for MATT are imported from Italy and knitted in Bavaria. A computerized knitting machine produces the knitted cable-cover of the light. The electric pieces are first put together, then threaded through the knit-ware by disabled people in a Berlin workshop (Vfj Werkstätten). The Merino yarn used on MATT is 100% pure. In its structure it is smooth and hardly hairy. The knitting is soft and dense.

weight:	1,5 kg

RAY is a lamp that has the capability to follow its owner on his/her heel. The cable of a hanging lamp is prolonged by 12 meters, thus enabling RAY to become a lying, hanging or atmospheric lamp. The possibilities for using the device are unlimited, adapting to any method of playful arrangement. The fluffy woven fabric of the knitting hides the sober technology within (like cables, socket and shade). The energy-saving bulb used for RAY radiates a warm, glowing light.

RAY hangs on to things, wraps objects together, follows the user to where it is needed, forming sculptures as it goes. In this way, the lamp combines the essentials of Ilot Ilov, who always aim to involve the user as a designer.

RAY's lampshade and the 12 meters of cable are covered by knitted merino wool. Due to this choice of material, it is intended to serve as a main source of light over a dinner table or in the designated reading corner. Used as a wall-mounted lamp, winding lamp, knotted or just lightly slung over the back of a chair - this lamp is made to create lighting space on a high aesthetic level whilst providing complete flexibility in adjusting to one's personal changing needs.

EARL is a flexible light that is convincing through its simple, but a dynamic system. The wooden pearls threaded on a cable act as levels in order to adjust the illuminating object. A hook locates the light source to any desired position. This provides an easy method of changing height and orientation, which enables a wide variety of implementation. The led light source is embedded into the biggest pearl at the end of the thread. The silicone shade is pushed onto this pearl without being fixated. Similar to a spherical joint, the silicone shade can be moved into different directions.

Each wooden pearl is marbled at Ilot Ilov design studio. The pieces are hand-turned by a woodturner in Poland. Each piece is slightly different.

GRIT

The stool GRIT stool with its thin wiring has the appearance of a delicate drawing. The cross-wiring resembles a steel basket and offers due to the many connecting points a lot of stability. To enhance sitting comfort a cork seat with the grit of the wiring on the underside can be added.

GRIT can be stacked and is equally suited for indoors and outdoors.
